Dear Friend,

Watching the birthday boy or girl dive into their very own cake is the highlight of the day. You'll be looking at those pictures and sharing the memories for years.

To create the perfect first birthday celebration, start with the 2010 Wilton Yearbook. Our special section, *First Birthday Bash!*, is filled with irresistible decorating ideas that put a fun new spin on favorite toddler themes. Cake Preparation

Think of your cake as the canvas on which you will create beautiful icing decorations. To achieve the masterpiece you want, it is essential that your canvas be smooth and free of crumbs. These steps for preparing and icing your cake will result in the perfect decorating surface essential for your work of art.

BAKING THE CAKE

Follow recipe directions for specific baking instructions and recommended batter amounts for the pan size you choose. Prepare the pan by generously greasing the inside using a pastry brush or paper towel and solid vegetable shortening. For best results, do not use butter, margarine or liquid vegetable oil. Spread the shortening so that all indentations are covered. Sprinkle about 2 Tablespoons of flour inside the pan and shake so that the flour covers all greased surfaces. Turn pan upside down and tap lightly to remove excess flour. If any uncovered spots remain, touch up with shortening and flour. Or use Bake Easy Non-Stick Spray or Cake Release (p. 154) to coat the pan—no grease or flour needed. Pour batter into pan and place in pre-heated oven.

After cake has baked the specified time, remove it from the oven and let it cool in the pan on a cake rack for 10 minutes. Run a thin knife between the cake and side of the pan. Unmold from pan by placing cooling rack against cake and turning both cooling rack and pan over. Lift pan off carefully. Cool at least one hour and brush off loose crumbs prior to icing.

CUTTING AND WRAPPING A CAKE BOARD

For round and sheet cakes, you don't need to cut a cake board. Simply buy a ready-made board that is 2 in. larger than your cake. (For example, if the cake is 8 in. diameter, buy a 10 in. round board.) For shaped cakes and squares, cut a board to fit. Turn pan upside down and trace outline onto your cake board. Cut board with a craft knife, leaving 1 in. extra around outline.

To wrap, trace your cut board onto Fanci-Foil, making the outline 3-4 in. larger than the board. Cut Fanci-Foil along the outline. Place your board, white side down, on top of your cut foil. Cut deep slits at several points along foil edge, creating tabs of foil to wrap neatly around the board. Secure foil tabs to the board with tape.

LEVELING THE CAKE

After the cake has cooled at least one hour, you'll need to level the top of the cake. This can be done using a serrated knife or the Cake Leveler (p. 154).

Using a Serrated Knife

Place the cake on a cake board, then place the board on a Trim 'N Turn Cake Turntable (p. 141). While slowly rotating the turntable, move the knife back and forth across the top of cake in a sawing motion to remove the crown. Try to keep knife level as you cut.

Using the Wilton Cake Leveler

Position the ends of the cutting wire (or feet on large leveler) into the notches at the desired height. With legs standing on the work surface, cut into the crusted edge using an easy sawing motion, then proceed by gently gliding wire through the cake.

TORTING THE CAKE

Torting adds extra height, drama and taste to the cake when the layers are filled with icing, pudding or fruit filling. A serrated knife or the Cake Leveler may be used to cut a cake into multiple layers.

Using a Serrated Knife

Divide cake sides and mark equal horizontal points with dots of icing or toothpicks all around. Place one hand on top of the cake to hold it steady and rotate the stand. While slowly turning the cake, move the knife back and forth to cut the cake along the measured marks. Repeat for each additional layer.

Using the Cake Leveler

Torting is easily accomplished with the Cake Leveler. Simply follow the same directions as for leveling.

Separating the Layers

Carefully slide the top tortured layer onto a cake board to keep it rigid and safe from breakage. Repeat for each additional layer.

FILLING THE LAYERS

Fill a decorating bag with medium consistency icing and use a large round tip, like tip 12. Or simply use the coupler without mounting a tip.

Starting with the bottom layer, leveled side up, create a dam of icing just inside the edge of the cake (about 3/4 in. high and 1/2 in. from the outside edge). Fill with icing, preserves or pudding. Place next layer on top, level; repeat. Finish with top layer leveled side down.

ICING THE CAKE

For better results, use a revolving turntable like professional decorators do...see our Trim 'N Turn Cake Turntables on p. 141.

Using a Spatula

The trick to keeping crumbs out of your icing is gliding your spatula on the icing—never allow it to touch the surface of the cake. Place a large amount of thin consistency icing on the center of the cake.

Spread icing across the top, pushing toward edges. Smooth the top using the edge of the spatula.

Sweep the edge of the spatula from the rim of the cake to its center then lift it off and remove excess icing.

Cover the sides with icing. Smooth sides by holding the spatula upright with the edge against the icing and slowly spinning the turntable without lifting the spatula from the icing surface. Return excess icing to the bowl and repeat until sides are smooth.

Rotate the cake slightly and repeat the procedure, starting from a new point on the rim until you have covered the entire top surface. Smooth the center of the cake by leveling the icing with the edge of your spatula. For easier smoothing, it may help to dip the spatula into hot water, wipe dry and glide it across the entire surface. Set the cake aside and allow the icing to crust over for at least 15 minutes before decorating. At that point you may also lay Non-Stick Parchment Paper (p. 154) on the iced cake top and gently smooth with the palm of your hand.

Using a Decorating Tip

Trim a 16 in. Featherweight bag to fit tip 789. Fill bag half full with icing. Hold bag at 45° angle and lightly press tip against cake. Squeeze a ribbon of icing in a continuous spiral motion to cover cake top, with last ribbon forcing icing over edge of cake top.

To ice the sides, squeeze icing as you turn the cake slowly. Repeat the process until the entire cake side is covered. Smooth sides and top with spatula, same as above.

Icing Basics

In this section, we've listed general descriptions of icings, their uses, qualities and consistencies. Use this information to determine the right icing for your cake. Refer to our recipes for homemade icings (p. 118) along with color instructions below, to create the look and taste you want.

ICING USAGE GUIDE

Icing Type	Flavor/Description	Consistency	Best Used For...	Coloring	Storage/Freshness	Special Information
Buttercream (Wilton Mix or homemade)	Sweet, buttery flavor. Tastes/looks great for most decorating.	Thin-to-stiff depending on amount of corn syrup or sugar added (sugar stiffens).	Icing cakes smooth. Borders, writing, flowers, decorations.	Yields all colors. Most deepen upon setting. Let set 2-3 hours for deep color. Some may fade in bright light. COLORING ICING

Mixing Colors

Begin with white icing and use concentrated Icing Colors (p. 148) which will not affect your icing consistency. (Using ordinary liquid food colors can thin your icing and affect your ability to pipe certain decorations.) If you are tinting icing dark brown or black, begin with chocolate icing—your icing will not have the aftertaste that large amounts of icing color can produce. If you are tinting a large area red, use No-Taste Red.

Dip a fresh toothpick into the color, then swirl it into the icing. Add color a little at a time until you achieve the shade you desire. Always use a new toothpick each time you add color; you want to avoid getting icing in your jar of color. Blend the icing well with a spatula.

Consider the type of icing you are using when mixing color. Icing colors intensify or darken in buttercream icing about 1-2 hours after mixing. Royal icing requires more color than buttercream icing to achieve the same color intensity.

Always mix enough of each icing color to complete your entire cake. For example, if you are going to decorate a cake with pink flowers and borders, color enough icing for both. It

is difficult to duplicate an exact shade of any color, and you will want to keep your colors consistent on your cake.

Bag Striping Effects

You can easily pipe two-tone decorations just by adding a different color inside the bag before you put in your tinted icing. This is how you pipe flowers with natural light and dark tones or make a rainbow-colored clown suit to brighten up the party.

Brush Striping

Produces more intense multiple colors because it is done with straight icing color brushed into the bag. Apply one or more stripes of icing color with a decorating brush, then fill the bag with white or pastel-colored icing. As the icing is squeezed past the color, your decorations will come out striped.

Spatula Striping

Produces two-tone and realistic pastel tones for flowers and figure piping. It is done with pastel-colored icing, striped inside the decorating bag with a spatula. After striping, fill the bag with white icing or another shade of the same color as the striping. Squeeze out decorations with soft contrasts.

MIXING SKIN SHADES

It's easy to create a wide variety of skin shades using various Wilton Icing Colors. Simply add desired color to white icing with a toothpick. If you wish to reach a shade lighter or darker than what is indicated, add slightly less or more of the icing color. Color listings for projects in this book reflect skin shade shown; feel free to choose your own shade.

1. To reach desired skin tone color, start with enough icing to cover the entire area, as matching shades later may be difficult.
2. Dip the end of a toothpick into the color or colors indicated, and swirl into icing and blend well.
3. Add color a little at a time until you achieve the shade you desire. Always use a new toothpick each time you add color to keep icing out of your jar of color.

Three Essentials of Cake Decorating

Every decoration you make is the result of three things working together: the consistency of your icing, the position of the bag (that is, the way you are holding it) and the amount and type of pressure you apply to the bag. You'll know when you have everything right because you'll get perfect results time after time. This will take practice. The more you concentrate on perfecting these three essentials, the sooner you will achieve perfect results.

ICING CONSISTENCY

If the consistency of your icing is not right, your decorations will not be right either. Just a few drops of liquid can make a great deal of difference in your decorating results. Many factors can affect icing consistency, such as humidity, temperature, ingredients and equipment. You may try using different icing consistencies when decorating to determine what works best for you. As a general guideline, if you are having trouble creating the decorations you want and you feel your icing is too thin, add a little more confectioners' sugar; if you feel your icing is too thick, add a little more liquid. In royal icing recipes, if adding more than ½ cup confectioners' sugar to thicken icing, also add 1-2 additional teaspoons of Meringue Powder (p. 145).

Stiff icing is used for figure piping and stringwork and for decorations like roses, carnations and sweet peas with upright petals. If icing is not stiff enough, flower petals will droop. If icing cracks when piped out, icing is probably too stiff. Add light corn syrup to icing used for stringwork to give strings greater elasticity so they will not break.

Medium icing is used for decorations such as stars, shell borders and flowers with flat petals. If the icing is too stiff or too thin, you will not get the uniformity that characterizes these decorations.

Thin icing is used for decorations such as printing and writing, vines and leaves. Leaves will be pointier, vines will not break and writing will flow easily if you add 1-2 teaspoons light corn syrup to each cup of icing. Thin icing is used to ice cakes smooth. Begin with your prepared icing recipe, then add small amounts of the same liquid used in the recipe (usually milk or water) until the proper spreading consistency is reached.

CORRECT BAG POSITION

The way your decorations curl, point and lie depends not only on icing consistency but also on the way you hold the bag and the way you move it. Bag positions are described in terms of both angle and direction.

Angle

Angle refers to the position of the bag relative to the work surface. There are two basic angle positions: 90° (straight up) and 45° (halfway between vertical and horizontal).

90° angle
or straight up,
perpendicular to
the surface.

45° angle
or halfway between
vertical and horizontal.

Direction

The angle in relation to the work surface is only half the story on bag position. The other half is the direction in which the back of the bag is pointed.

Correct bag direction is easiest to learn when you think of the back of the bag as the hour hand of a clock. When you hold the bag at a 45° angle to the surface, you can sweep out a circle with the back end of the bag by rolling your wrist and holding the end of the tip in the same spot. Pretend the circle you formed in the air is a clock face. The hours on the clock face correspond to the direction you point the back end of the bag.

**Back of bag
at 6:00**

**Back of bag
at 3:00**

The technique instructions in this Decorating Guide will list the correct direction for holding the bag. When the bag direction differs for left-handed decorators, that direction will be listed in parentheses. For example, when a bag is to be held at 3:00 for a right-handed decorator, it should be held at 9:00 for a left-handed decorator.

One more thing...since most decorating tip openings are the same shape all the way around, there's no right side and wrong side up when you're squeezing icing out of them. However, some tips, such as petal, ruffle, basketweave and leaf have irregularly shaped openings. For those you must watch your tip position as well as your bag position. If the tip opening must be in a special position, the instructions will tell you.

PRESSURE CONTROL

In addition to having the proper icing consistency and the correct bag position, you'll need to master three types of pressure control: heavy, medium and light. The size and uniformity of your icing designs are affected by the amount of pressure you apply to the bag and the steadiness of that pressure. (In other words, how you squeeze and relax your grip on the decorating bag.) Your goal is to learn to apply pressure so consistently that you can move the bag in a free and easy glide while just the right amount of icing flows through the tip. Practice will help you achieve this control.

**Heavy
Pressure**

**Medium
Pressure**

**Light
Pressure**

Storing Cakes

Take some final precautions and store your cake the best way possible. After all, your time, effort and creativity have made it very special! Beware of the following factors, which can affect the look of your decorated cake.

Sunlight and fluorescent lighting will alter icing colors. Keep your cake stored in a covered box and out of direct sunlight and fluorescent lighting.

Humidity can soften royal icing, fondant and gum paste decorations. If you live in a climate with high humidity, prepare your royal icing using only pure cane confectioners' sugar (not beet sugar or dextrose), add less liquid and add 1 more teaspoon Meringue Powder (p. 145) to the recipe.

Heat can melt icing and cause decorations to droop. Keep your decorated cake as cool as possible and stabilize buttercream icing by adding 2 teaspoons Meringue Powder per recipe. Protect your cake by placing it in a clean, covered cake box. Avoid using foil or plastic wrap to cover a decorated cake—these materials can stick to icing and crush delicate decorations. The icing that covers your cake determines how it should be stored—in the refrigerator, at cool room temperature, or frozen, if storing for longer than 3 days. If you want to store your iced cake in a different way than noted, make a small test cake.

Icing type determines care. See chart on p. 113 for storage information.

NOTE: Cakes with thoroughly-dried royal icing decorations should be stored according to the type of icing that covers the cake. However, if royal icing decorations are to be put on a cake that will be frozen, it is recommended that these decorations be placed on the cake after thawing so that they don't bleed from condensation or become soft.

Transporting Tiered Cakes

Moving a tiered cake from one location to another does not have to be difficult. It can be quite easy! Following some simple guidelines ensures that your cake will arrive safely—whether you are traveling hundreds of miles or just a few.

Before Moving Cakes

Be certain the cake is constructed on a sturdy base made of three or more thicknesses of corrugated cardboard. Base tiers of very heavy cakes should be placed on a foamcore or plywood base, ½ in. thick. Cakes on pillars must be transported unassembled. Toppers, candles and ornaments should be removed from cakes when they are being moved. For stacked cakes, move the entire assembled cake. Or, for a larger quantity of tiers, transport unassembled and assemble at the reception. Be sure to have with you the equipment and icings you will need to finish any decorating needed after assembly at the reception.

For a cake which combines stacked and 2-plate construction, take tiers apart, keeping stacked tiers as units. Boxing the cake makes transportation easier. Not only does it protect the tiers from damage, but it keeps the tiers clean—free from dirt, dust and bugs. Place the boxes on carpet foam or a non-skid mat on a level surface in the vehicle to prevent shifting. Keep the boxes flat; never place on a car seat. Boxed cakes can also be transported in the trunk of the car, except in hot weather, because air conditioning will not reach the trunk area. It's also important to find out about the reception location before the event. Knowing what to expect when you arrive can make your delivery and setup so much easier. Call the reception hall a few days before the event to get an idea of the conditions you will encounter there. Ask whether the room is located upstairs or downstairs. Find out what is the best location for bringing the cake into the building. That way you can park in the right place the first time and minimize the distance your cake has to travel from your car. Also ask how far in advance the cake can be set up so that you can plan your day and reduce the stress.

At Your Destination

Before you bring in the cake from your car, walk the path you will have to travel to the set-up site. Be alert for any bumps along the way and note any tight spaces you will have to maneuver around. Make sure the cake table is level—it's a good idea to bring a level to check this on setup day. Request a cart on wheels to move the cake into the reception area. This is easier and safer than carrying by hand. Remove the cakes from the boxes on the reception table by cutting the sides of the boxes and sliding the cakes out. Bring along a repair kit, including extra icing, prepared decorating bags and tips, flowers and spatulas, just in case it is necessary to make any repairs. Once the cake is assembled, take a picture to establish that the cake was in perfect condition when you left it.

In Pan

Take tiers apart if constructed in Center Column or Push-In Leg method. Leave columns or legs in place. Position the plates on crumpled foil or in shallow pans if they do not sit level. Remove pillars from tier plates; plates stay in position.

In Box

Place the cakes in clean, covered, sturdy boxes that are sized to the base board of each cake. This prevents shifting within the box and possibly crushing the sides of the cake. If the box is too big, roll pieces of masking tape sticky side out and attach to the inside bottom of the box. Position the cake base on top of the tape, securing the base in the box. For taller decorations, prop up box top and sides, secure with masking tape.

On Non-Skid Foam

If tiers cannot be boxed, they can be transported on large pieces of non-skid foam. Place the foam on the floor of the vehicle, then carefully place the tiers centered on each piece of foam. Remove any ornament or fragile decorations before transporting.

Cake Baking and Serving Guides

The charts below are based on baking recommendations from the Wilton Test Kitchen; your results may vary depending on oven performance or altitude in your area. For large cakes, always check for doneness after they have baked for 1 hour.

Serving amounts are based on party-sized portions of 1.5 x 2 in. or smaller wedding-sized portions of approximately 1 x 2 in. Cakes from 3 to 6 in. high, baked in the same size pan, would yield the same number of servings because they follow the same pattern of cutting. Cakes shorter than 3 in. would yield half the number of servings indicated for that pan. Number of servings are intended as a guide only.

Icing amounts are very general and will vary with consistency, thickness applied and tips used. Icing amounts allow for top and bottom borders.

4 IN. HIGH CAKES (using 2 in. high pans)

The figures for 2 in. pans are based on a 2-layer, 4 in. high cake. Fill pans $\frac{1}{2}$ to $\frac{3}{4}$ full.

General Cake Cutting Guides

The diagrams below will give you a general plan for cutting the most popular cake shapes. They will help you serve more attractive, uniform pieces while reaching your targeted number of servings. Diagrams show only one size in each shape; you will use the same general technique to cut each size cake in that shape.

WEDDING CAKES—1 x 2 in. slices

The diagrams show how to cut popular shaped wedding tiers into slices approximately 1 x 2 in. and 2 layers high (about 4 in.) For cakes shorter than 3 in., you will need to cut wider slices to serve a proper portion; even if a larger serving size is desired, the order of cutting is still the same. Before cutting the cake, remove the top tier, which is usually saved for the first anniversary and is not included in our serving amounts for wedding cakes in this book. Begin by cutting the 2nd tier, followed by the 3rd, 4th and so on.

12 in.

Square Tiers:

Move in 2 in. from the outer edge and cut vertically, top to bottom. Slice and serve 1 in. pieces of cake. Now move in another 2 in. and repeat process until the entire tier is cut.

12 in.

Round Tiers:

Move in 2 in. from the tier's outer edge and cut a circle. Slice and serve 1 in. pieces from around the circle. Now move in another 2 in. and cut another circle. Repeat process until the tier is completely cut. The center core of each tier and the small top tier can be cut into 4ths, 6ths, or more, depending on size.

17 x 12 in.

Paisley Tiers:

Move in 2 in. from the outer edge and cut across. Slice and serve 1 in. pieces of cake, similar to oval tiers as diagram shows. Now move in another 2 in., repeat process until the entire tier is cut.

Heart Tiers:

Divide the tiers vertically into 2 in. wide rows. Within rows, slice and serve 1 in. pieces of cake.

12 in.

12 in.

Hexagon Tiers:

Move in 2 in. from the outer edge and cut across. Slice and serve 1 in. pieces of cake. Now move in another 2 in., repeat process until the entire tier is cut.

13.5 x 9.8 in.

Oval Tiers:

Move in 2 in. from the outer edge and cut across. Slice and serve 1 in. pieces of cake. Now move in another 2 in., repeat process until the entire tier is cut.

15 in.

Petal Tiers:

Cut similar to round tiers as diagram shows.

Diamond Tiers:

Move in 2 in. from any outer edge and cut across. Slice and serve 1 in. pieces of cake. Now move in another 2 in. and repeat process until the entire tier is cut.

15 x 11 in.

PARTY CAKES—1.5 x 2 in. slices

Follow the diagrams above to cut party cakes (from 3 to 6 in. high), but adjust for the larger party-size slices. For cakes shorter than 3 in. you will need to cut wider slices to serve a proper portion; even if a larger serving size is desired the order of cutting is still the same.

Rounds:

To cut round cakes, move in 2 in. from the cake's outer edge; cut a circle and then slice approximately 1.5 in. pieces within the circle. Now move in another 2 in. and cut another circle; slice approximately 1.5 in. pieces. Continue until the cake is completely cut. Note: 6 in. diameter cakes should be cut in wedges, without a center circle. Cut petal and hexagon cakes similar to round cakes.

Squares:

To cut square cakes, move in 2 in. from the outer edge and cut top to bottom, then slice approximately 1.5 in. pieces. Now move in another 2 in. and continue until the entire cake is cut.

Sheets: Cut sheet cakes similar to square cakes.

Tiered Cake Construction

There are many methods of constructing tiered cakes. Here are some used in this book. Visit www.wilton.com for more construction methods.

TO PREPARE CAKE FOR ASSEMBLY

Place base tier on a sturdy base plate of 3 or more thicknesses of corrugated cardboard. For heavy cakes, use foamcore or plywood $\frac{1}{2}$ in. thick. Base can be covered with Fanci-Foil Wrap and trimmed with Tuk-'N-Ruffle or use Ruffle Boards (p. 241). Each tier of your cake must be on a cake circle or board cut to fit. Place a few strokes of icing on boards to secure cake. Fill and ice layers before assembly.

Adding Dowel Rods to Tiered Cakes

Use the upper tier for size reference when determining dowel rod placement. All the dowel rods must be placed within the area you will mark (see steps below) to provide adequate support.

1. Center a cake board the same size as the tier above it on base tier and press it gently into icing to imprint an outline. Remove. Use this outline to guide the insertion of the dowel rods.

2. Insert one dowel rod into cake straight down to the cake board. Make a knife scratch on the rod to mark the exact height. Pull dowel rod out.

3. Cut the suggested number of rods (see note below) the exact same length, using the mark on the first one as a guide.

4. Insert rods into tier, spacing evenly $1\frac{1}{2}$ inches in from the imprinted outline. Push straight down until each touches the cake board. Repeat this procedure for every stacked or pillared tier on the cake.

NOTE: The larger and more numerous the tiers, the more dowels needed. If the tier above is 10 in. or less, use six $\frac{1}{4}$ in. wooden dowels. Use 8 dowel rods for 16 in. and 18 in. cakes; on these larger tiers, use $\frac{1}{4}$ in. plastic dowel rods in the base tier. When using white plastic dowel rods that are wider and provide more support, the number needed may be less.

Stacked Construction

Stacking is the most architectural method of tiered cake construction. Tiers are placed directly on top of one another and pillars are not used. Cakes are supported and stabilized by dowel rods and cake boards.

1. Dowel rod all tiers except top tier.

2. Position the middle tier on the base tier, centering exactly.*

3. Repeat with the top tier.

4. To stabilize tiers further, sharpen one end of a long dowel rod and push it through all tiers and cake boards to the base of the bottom tier. To decorate, start at the top and work down.

*Finely shredded coconut or confectioners' sugar, placed in area where cake circles or plastic plates will rest, helps prevent icing on the cake from sticking.

Separator Plate (2-Plate) and Pillar Construction

This most dramatic method features 2, 3 or more single cakes towered together. Use separator plates and pillars (p. 237-239). Check pillars and plates for correct fit before constructing your cake.

1. Set cake tiers on separator plates 2 in. larger in diameter than cakes.

2. Dowel rod cakes and position separator plates on tiers with feet up. (Note: Connect only same size separator plates with pillars.)

3. Position pillars over feet on separator plates.

4. Carefully set cake plate on pillars. Continue adding tiers this way.**

**Assemble cakes when you arrive at the reception or party.

Push-In Pillar Construction

Simple assembly—no dowel rods needed! Use any type of Wilton push-in pillars and plates (p. 237). Check pillars and plates for correct fit before constructing your cake.

1. Mark tier for push-in pillar placement. Use the separator plate for the next tier above, gently pressing it onto the tier, feet down, making sure it is centered. Lift plate away. The feet will leave marks on the icing to guide the position of pillars when you assemble the tier. Repeat this process for each tier, working from largest to smallest tier. The top tier is left unmarked.

2. Place each tier on its separator plate, securing with icing.

3. Position push-in pillars at marks, and insert into tiers. Push straight down until pillars touch the cake plate.

4. To assemble, start with the tier above the base tier. Place the feet of the separator plate on the pillar openings. Continue adding tiers in the same way until the cake is completely assembled.**

Center Column Construction (Tall Tier Stand) (p. 239)

1. Use boards the same size as tiers, or if tiers are shaped, cut boards to fit. Make a waxed paper pattern for each tier except the top tier in order to find the exact center for the columns. Fold the pattern in quarters. Snip the point to make a center hole. Test the hole for size by slipping it over a column, adjust size if necessary. Trace hole pattern on prepared cake board and cut out. Also cut a hole in the top tier board to allow for the column cap nut. Save patterns for marking cake tops later.

2. The base tier of the cake will rest on a 14, 16 or 18 in. plate. (18 in. plate is footed. Do not use a bottom plate smaller than 14 in.) To add legs to bottom plate, turn it upside down; using extra-strength glue designed for plastic, attach the six legs, positioning the legs over each of the ribs on the plate.

3. Prepare and ice tiers and position on prepared cake boards. Make the center holes for the columns in all tiers except the top tier. Mark the top of the cakes with corresponding waxed paper pattern. Cut the hole by pressing a Cake Corer Tube or a Hidden Pillar (p. 237) through the tier right down to the bottom. Hold the corer upright, remove cake corer and push the upper part down to eject the cake center.

4. Screw in a column to the prepared base plate and bottom column bolt from underneath the plate. Slip the next size tier on its plate over the column.

5. Add a second column and position the next size tier on its plate, slipping it over the column. Finally, add on the top plate only, securing the top column nut. Place the top tier on the plate and decorate bottom border.**

Globe Pillar Set Construction

These elegant pearl-look globes (p. 238) are available in separate sets of four 2 in., 2½ in., or 3 in. globes. The 3 in. globes are to be used to support the base cake only. They have a reinforced center channel which eliminates the need for pillars. The 2 and 2½ in. sets should be used with 8 in. "Hidden" Pillars (included in set); do not use these sets to support the base cake. Your cake design may use a base board instead of the 3 in. globes to support the base cake as shown below.

1. Position separator plate holding base cake on 3 in. Globe Base Set or a thick base board. Using the separator plate which will hold the cake above, mark base cake for pillar placement (see Push-In Pillar construction, p. 116). Lift plate away.

2. Insert pillars through cake centered over marked area to rest on its separator plate or base board. Place the correct size globe (2½ in. for cake shown here) over the pillars. Mark pillars where they extend above globes. The cut pillars should be equal to the height of the base cake plus the height of each globe.

3. Trim pillars at markings with craft knife or serrated edge knife.

4. Insert pillars in base cake. Position globes over pillars.

5. Position the tier above on globes.

6. Add additional sets for more tiers.

Tailored Tiers Construction

Our Tailored Tiers Cake Display Set (p. 238) features fabric-wrapped separators which add great texture to your tiered design. The top 2 tiers are decorated on same-size boards, then transported to the reception on larger boards, so that cakes can be easily transferred to the separator plates during assembly. Bottom borders are then added to these tiers. The recommended display for Tailored Tiers separators includes a 14 in. base cake, a 10 in. center cake and a 6 in. top cake.

1. Ice cakes; place 14 in. base cake on 16 in. base board wrapped in foil or 16 in. Silver Cake Base (p. 241). Place 10 in. center and 6 in. top cakes on same size boards. Mark 14 in. and 10 in. cakes for placement of dowel rods. Center the 8 in. plate from the Tailored Tiers set on top of the 14 in. cake and press it gently into icing to imprint an outline. Remove. Use this outline to guide the insertion of dowel rods.

2. Dowel rod 14 in. cake (see page 116). Place the 6 in. plate from set on top of the 10 in. cake and repeat process for marking and inserting dowel rods. Complete decorating on cakes, except bottom borders of 10 in. center and 6 in. top cakes, which will be done at reception. Attach 10 in. and 6 in. cakes to larger boards before transferring to reception.

3. Place the 12 in. plate (spikes up) on table. Center the large (7¼ in.) separator over the plate and press down over the spikes. Position one 8 in. plate (spikes down) on top of the large separator. Place the second 8 in. plate (spikes up) on table. Center the small (4¼ in.) separator over the plate and press down over the spikes. Position the 6 in. plate (spikes down) on top of the small separator.

4. At reception: Position the large separator, with 8 in. plate on bottom and 12 in. plate on top, on the base cake. Remove 10 in. and 6 in. cakes from their larger boards. Position 10 in. cake on large separator.

5. Add bottom border to 10 in. cake. Position the small separator, with 6 in. plate on bottom and 8 in. plate on top, on the 10 in. cake. Position 6 in. cake on small separator. Add bottom border.

To Use Acetate Wrap for Tailored Tiers

1. Insert photos, patterned paper or fabric in pockets of acetate wrap. Trim inserted items as needed to fit.
2. Wrap acetate around separator and fasten hook and loop ends.

Alternate 2-Plate Set-Ups

The Fluted Bowl and Spiral Separator Sets shown below are assembled similar to 2-Plate and Pillar Construction (p. 116)—the separators provide support instead of pillars; each set includes 2 separator plates. Cakes must still use dowel rods to support cakes and secure the separators.

Fluted Bowl Separator Set (p. 238)

Spiral Separator Set (p. 238)

Dowel rod base cake as for 2-Plate & Pillar Construction. Position smaller plate from set on base cake (spikes up). Position Fluted Bowl or Spiral Separator over spikes. Position next tier on larger plate from set. Position plate (spikes down) on separator.

ICING RECIPES

Buttercream Icing (Medium consistency)*

½ cup solid vegetable shortening
½ cup (1 stick) butter or margarine, softened

1 teaspoon Clear Vanilla Extract (p. 145)

4 cups sifted confectioners' sugar (about 1 lb.)

2 tablespoons milk

In large bowl, cream shortening and butter with electric mixer. Add vanilla. Gradually add sugar, one cup at a time, beating well on medium speed. Scrape sides and bottom of bowl often. When all sugar has been mixed in, icing will appear dry. Add milk and beat at medium speed until light and fluffy. Keep bowl covered with a damp cloth until ready to use. For best results, keep icing bowl in refrigerator when not in use. Refrigerated in an airtight container, this icing can be stored 2 weeks. Rewhip before using. Makes about 3 cups.

For thin (spreading) consistency icing. add 2 tablespoons light corn syrup, water or milk.

For Pure White Icing (stiff consistency), omit butter; substitute an additional ½ cup vegetable shortening for butter and ½ teaspoon No-Color Butter Flavor (p. 145). Add up to 4 tablespoons light corn syrup, water or milk to thin for icing cakes.

Chocolate Buttercream Icing

Add ¾ cup cocoa powder (or three 1 oz. squares unsweetened chocolate, melted) and an additional 1-2 tablespoons milk to buttercream icing. Mix until well blended. For a unique change of pace, substitute ¼ to ½ teaspoon Wilton Candy Flavors (p. 199) for vanilla extract.

Chocolate Mocha Icing: Substitute brewed strong coffee for milk in Chocolate Buttercream recipe.

Darker Chocolate Icing: Add an additional ¼ cup cocoa powder (or 1 additional 1 oz. square unsweetened chocolate, melted) and 1 additional tablespoon milk to Chocolate Buttercream icing.

Snow-White Buttercream* Icing (Stiff consistency)

¾ cup plus 3 tablespoons water, divided

¼ cup Meringue Powder (p. 145)

12 cups sifted confectioners' sugar (about 3 lbs.), divided

1¼ cups solid vegetable shortening

3 tablespoons light corn syrup

¾ teaspoon salt

¾ teaspoon No-Color Almond Extract (p. 145)

¾ teaspoon Clear Vanilla Extract (p. 145)

½ teaspoon No-Color Butter Flavor (p. 145)

In large bowl, combine ¾ cup water and meringue powder; whip with electric mixer at high speed until peaks form. Add 4 cups sugar, one cup at a time, beating at low speed after each addition. Add remaining 8 cups sugar and 3 tablespoons water, shortening and corn syrup in 3 additions, blending well after each.

Add salt and flavorings; beat at low speed until smooth.

Makes about 7 cups.

For thin (spreading) consistency icing. add up to 4 more tablespoons each water and corn syrup.

NOTE: Recipe may be doubled or halved.

Royal Icing

3 tablespoons Meringue Powder (p. 145)

4 cups sifted confectioners' sugar (about 1 lb.)

6 tablespoons water¹

Beat all ingredients at low speed for 7-10 minutes (10-12 minutes at high speed for portable mixer) until icing forms peaks. Makes about 3 cups.

¹When using large countertop mixer or for stiffer icing, use 1 tablespoon less water.

Thinned Royal Icing: To thin for pouring, add 1 teaspoon water per cup of royal icing. Use grease-free spoon or spatula to stir slowly. Add ½ teaspoon water at a time until you reach proper consistency.

Stabilized Whipped Cream Icing

½ pint (1 cup) heavy whipping cream
2 tablespoons confectioners' sugar
2 tablespoons Piping Gel (p. 145)
½ teaspoon Clear Vanilla Extract (p. 145)

Combine whipping cream and sugar in mixing bowl. Whip to soft peak stage. Add Piping Gel and vanilla, then continue to whip until stiff peaks form. Do not overbeat. Makes 1 ½ to 2 cups.

As an alternative, you can use frozen non-dairy whipped topping or packaged topping mix. Thaw frozen whipped topping in refrigerator before coloring or using for decorating. Use packaged topping mix immediately after preparing. Do not allow either to stay at room temperature, as it becomes too soft for decorating. Store decorated cake in refrigerator until ready to serve.

Heated Wilton Ready-To-Use Decorator Icing (p. 145)

Open icing container, remove foil. Microwave at 30% (Defrost) Power for 20-30 seconds, stirring at least once, until ready to pour. If a microwave is unavailable, icing container can be heated on a warming tray or in a pan of hot water on a stove.

Color Flow Icing Recipe (full-strength for outlining)

¼ cup + 1 teaspoon water

4 cups sifted confectioners' sugar (about 1 lb.)

2 tablespoons Color Flow Mix (p. 145)

With electric mixer, using grease-free utensils, blend all ingredients on low speed for 5 minutes. If using hand mixer, use high speed. Color Flow icing "crusts" quickly, so keep bowl covered with a damp cloth while using. Stir in desired icing color. Makes about 2 cups.

Thinned Color Flow: To fill in an outlined area, the recipe above must be thinned with ½ teaspoon of water per ¼ cup of icing (just a few drops at a time as you near proper consistency). Use grease-free spoon or spatula to stir slowly. Color Flow

is ready for filling in outlines when a small amount dropped into the mixture takes a count of ten to disappear.

NOTE: Color flow designs take a long time to dry, so plan to do your color flow piece up at least 2 or 3 days in advance.

Poured Cookie Icing

This icing dries to a shiny, hard finish. Great to use as icing or to outline and fill in with tip 2 or 3.

1 cup sifted confectioners' sugar

2 teaspoons milk

2 teaspoons light corn syrup

Place sugar and milk in bowl. Stir until thoroughly mixed. Add corn syrup; mix well. For filling in areas, use thinned icing (add small amounts of light corn syrup until desired consistency is reached). Makes about ½ cup.

½ cup heavy whipping cream

Chop candy (you can use a food processor). Heat whipping cream in saucepan just to boiling point. Do not boil. Remove from heat and add chopped candy, stir until smooth and glossy.

Whipped Ganache: Follow recipe above, using 1 cup whipping cream. Allow mixture to set and cool to room temperature (mixture will have the consistency of pudding; this may take 1-2 hours). Whip on high speed with an electric mixer until light and soft peaks form.

Truffles: Add 1 tablespoon liqueur for flavor, if desired. Stir until smooth and creamy. Refrigerate until firm. Roll into 1 in. diameter balls. Can be used as center for dipped candies, served plain or rolled in nuts, coconut or cocoa powder. Store truffles in refrigerator up to 3 weeks. Makes about 2 dozen (1 in.) balls.

Ganache Glaze: If mixture is too thick, add 1 to 2 tablespoons whipping cream. Position cake on wire rack over drip pan. Pour glaze onto center and work out toward edges.

NOTE: Cake may be iced first in buttercream. Let icing set, then pour on ganache glaze. If cake has a perfect surface, no other icing is needed.

ROLLED FONDANT AND GUM PASTE RECIPES

Fondant is rolled out and used as a covering for any firm-textured cake, pound cake or fruit cake, which is traditionally first covered with a layer of marzipan to seal in flavor and moistness of the cake. A light layer of buttercream icing or apricot glaze may also be used. Cakes covered with rolled fondant can be decorated with royal or buttercream icing. Wilton also offers convenient Ready-To-Use Rolled Fondant (p. 149) for easy-to-handle fondant with no mixing.

Rolled Fondant

1 tablespoon plus 2 teaspoons unflavored gelatin
¼ cup cold water
½ cup Wilton Glucose (p. 149)
2 tablespoons solid vegetable shortening
1 tablespoon Wilton Glycerin (p. 149)
Icing color and flavoring, as desired
8 cups sifted confectioners' sugar (about 2 lbs.)

Combine gelatin and cold water; let stand until thick. Place gelatin mixture in top of double boiler and heat until dissolved. Add glucose, mix well. Stir in shortening and just before completely melted, remove from heat. Add glycerin, flavoring and color. Cool until lukewarm. Next, place 4 cups confectioners' sugar in a bowl and make a well. Pour the lukewarm gelatin mixture into the well and stir with a wooden spoon, mixing in sugar and adding more, a little at a time, until stickiness disappears. Knead in remaining sugar. Knead until the fondant is smooth, pliable and does not stick to your hands. If fondant is too soft, add more sugar; if too stiff, add water (a drop at a time). Use fondant immediately or store in airtight container in a cool, dry place. Do not refrigerate or freeze. When ready to use, knead again until soft. This recipe makes approx. 36 oz., enough to cover a 10 x 4 in. round cake.

Extra-Firm Rolled Fondant

Use this recipe for a fondant with the extra body and pliability ideal for making drapes, swags and elaborate decorations.

1 to 2 teaspoons Gum-Tex (p. 149)
24 oz. Ready-To-Use Rolled Fondant (p. 149)
Knead Gum-Tex into fondant until smooth. Store in an airtight container or tightly wrapped in plastic.

Gum Paste

Clay-like gum paste can be rolled thinner than fondant for finer detail. Gum paste dries hard and is meant for decoration only; remove from cake before serving. For perfectly mixed gum paste whenever you need it, try Wilton Ready-To-Use Gum Paste (p. 149).

1 tablespoon Gum-Tex (p. 149)
3 cups sifted confectioners' sugar (about ¾ lb.)
1 heaping tablespoon Glucose (p. 149)
4 tablespoons warm water
1 cup sifted confectioners' sugar (save until ready to use)

In a large bowl, mix Gum-Tex into 3 cups confectioners' sugar. Make a well in the center and set aside. Mix water and glucose in a glass measuring cup and blend; heat in microwave on high for about 30 seconds until mixture is clear. Pour into well of 3 cups confectioners' sugar and mix until well blended (mixture will be very soft). Place mixture in a plastic bag and seal tightly; let mixture rest at room temperature for 8 hours or overnight. Knead remaining confectioners' sugar into gum paste when you are ready to use it. As you work it in, gum paste will whiten and soften.

Apricot Glaze

Ideal for preparing a cake for fondant or for crumb-coating cakes before icing.
1 cup apricot preserves
Heat preserves to boiling, strain. Brush on cake while glaze is still hot. Let dry. Glaze will dry to a hard finish in 15 minutes or less. Makes enough to cover a 10 x 4 in. cake.

Thinned Fondant Adhesive

Use this mixture when attaching dried fondant to other fondant decorations or for attaching freshly-cut fondant pieces to lollipop sticks or florist wire.

1 oz. Wilton Ready-To-Use Rolled Fondant (p. 149) (1½ in. ball)
¼ teaspoon water

Knead water into fondant until it becomes softened and sticky. To attach a fondant decoration, place mixture in decorating bag fitted with a small round tip, or brush on back of decoration. Recipe may be doubled.

Gum Paste Adhesive

This easy-to-make "glue" will hold your gum paste flowers and other decorations together.

1 tablespoon Wilton Meringue Powder (p. 145)
1 tablespoon water

Mix Meringue Powder and water together; add more water if mixture is too thick. Brush on decorations.

Chocolate Fondant

1-pk. (14 oz.) Dark Cocoa Candy Melts (p. 196)
½ cup light corn syrup
24 oz. White Ready-To-Use Rolled Fondant (p. 149)
Brown or Black Icing Color (p. 148, optional)
Melt Candy Melts following package directions. Add corn syrup; stir to blend. Turn out mixture onto waxed paper; let stand at room temperature to dry and harden several hours. Wrap well and store at room temperature until ready to continue with recipe.

Knead small portions of candy mixture until soft and pliable. Knead softened mixture into fondant until smooth and evenly colored. If darker color is desired, knead in icing color.

Quick-Pour Fondant Icing

6 cups sifted confectioners' sugar (about 1½ lbs.)
½ cup water
2 tablespoons light corn syrup
1 teaspoon No-Color Almond Extract (p. 145)
Wilton Icing Colors (p. 148)

Cakes should be covered with apricot glaze (see recipe above) or a thin coating of buttercream icing. Let set 15 minutes before covering with fondant.

Place sugar in saucepan. Combine water and corn syrup. Add to sugar and stir until well mixed. Place over low heat. Don't allow temperature of fondant to exceed 100°F. Remove from heat, stir in flavor and icing color. To cover, place cake or cookies on cooling grid over a drip pan. Pour fondant into center and work towards edges. Touch up bare spots with spatula. Let set. Excess fondant can be reheated. Makes 2½ cups.

Using Rolled Fondant

The dough-like consistency of fondant makes it the perfect medium for creating ruffles and braids, stately molded accents, distinctive borders, fun trims and beautiful flowers. Decorators agree that fondant is an icing that is truly easy to work with. It's even easier with Wilton Ready-To-Use Rolled Fondant (p. 149)—no mixing, no mess!

COVERING THE CAKE

Just follow our instructions for the right ways to knead, roll out and lift the fondant, and you'll find that covering a cake is easy. For instructions on covering Square, Petal and other cake shapes, see the *Celebrate With Fondant* book, available on p. 133.

1. Prepare cake by lightly covering with buttercream icing.

2. Before rolling out fondant, knead it until it is a workable consistency. If fondant is sticky, knead in a little confectioners' sugar. Lightly dust your smooth work surface or the Roll & Cut Mat and your rolling pin with confectioners' sugar to prevent sticking. Roll out fondant sized to your cake (see "Fondant Amounts," at right). To keep fondant from sticking, lift and move as you roll. Add more confectioners' sugar if needed.

3. Gently lift fondant over rolling pin and position on cake.

4. Shape fondant to sides of cake with Easy-Glide Smoother. We recommend using the Smoother because the pressure of your hands may leave impressions on the fondant.

Use the straight edge of the Smoother to mark fondant at the base of cake. Trim off excess fondant using a spatula or sharp knife.

5. Smooth and shape fondant on cake using Easy-Glide Smoother (p. 147). Beginning in the middle of the cake top, move the Smoother outward and down the sides to smooth and shape fondant to the cake and remove air bubbles. If an air bubble appears, insert a pin on an angle, release air and smooth the area again.

COVERING LARGE CAKES

In most cases, the smaller your cake, the easier it will be to cover with rolled fondant. However, there is an easy way to position and smooth fondant on cakes that are 12 in. diameter or larger. Follow the steps below to lift fondant onto the cake without tearing.

1. Cover cake lightly with buttercream icing. Roll out fondant sized to fit your cake.
2. Slide a large cake circle that has been dusted with confectioners' sugar under the rolled fondant. Lift the circle and the fondant and position over cake. Gently shake the circle to slide the fondant off and into position on the cake. Smooth and trim as described above.

USING FONDANT IMPRINT MATS (p. 150)

1. Roll out fondant 1/8 in. thick using rolling pin.

2. Lift fondant onto Fondant Imprint Mat using rolling pin. Or, place Fondant Imprint Mat on top of rolled fondant.

3. If fondant is on top of Fondant Imprint Mat, smooth by pressing firmly with Wilton Easy-Glide Fondant Smoother (p. 151) or roll with rolling pin. If fondant is below Fondant Imprint Mat, roll with rolling pin.

4. Lift Fondant Imprint Mat with fondant attached and center imprinted fondant on cake. Peel back mat. Smooth fondant around cake by gently pressing with heel of hand.

HOW TO COLOR AND FLAVOR FONDANT

You can easily tint our White Ready-To-Use Rolled Fondant (p. 149) or the Rolled Fondant recipe (above) using Wilton Icing Colors (p. 148). Using a toothpick, add icing color, a little at a time, and knead into fondant until color is evenly blended. Wilton Ready-To-Use Rolled Fondant has a mellow flavor which can be enhanced using Wilton No-Color Butter Flavor, Clear Vanilla Extract or No-Color Almond Extract (p. 145). Knead flavor into fondant until well blended.

Tip Techniques

Your icing turned out great—now you're ready to learn how to pipe beautiful shapes on your cake. Stars, shells, dots, lines and other techniques are the foundation of your decorating knowledge. We'll tell you step-by-step how to pipe each one, including the angle, pressure and movement to use for a uniform look. With practice, you can build on these basics to create many other impressive designs.

ROUND TIPS

Dot

Pipe dots for flower centers, faces, figure piping and border effects. When making large dots, lift the tip as you squeeze to allow icing to fill out completely.

Practice With: Tip 3
Icing Consistency: Medium
Bag Position: 90°
Hold Tip: Slightly above surface

1. Hold the bag straight up with the tip slightly above the surface. Squeeze the bag and keep point of the tip in icing until the dot is the size you want.
2. Stop squeezing the bag completely before you lift the tip from the dot.
3. Lift tip up and pull away from piped dot.

Ball

An important technique to master, the ball shape makes bold borders and is the first step to learn for figure piping. Vary the basic look by adding stars, dots or spirals on the ball shapes.

Practice With: Tip 9
Icing Consistency: Medium
Bag Position: 90°
Hold Tip: Slightly above surface

1. Squeeze the bag, applying steady even pressure. As the icing begins to build up, raise the tip with it, but keep the tip and buried in the icing.
2. Stop squeezing as you bring the end of the tip to the surface.
3. Lift the tip up and pull away from your piped ball. Use the edge of the tip to shave off any point so that your ball is nicely rounded.

Bead

If you can pipe a shell, you can pipe a bead—the movements are similar. To pipe a bead heart, simply pipe one bead, then a second, joining the tails. Smooth together using a decorator brush.

Practice With: Tip 5
Icing Consistency: Medium
Bag Position: 45° at 3:00 (9:00)
Hold Tip: Slightly above surface

1. Squeeze as you lift tip slightly so that icing fans out.
2. Relax pressure as you draw the tip down and bring the bead to a point.
3. To make a bead border, start the end of your next bead so that the fanned end covers the tail of the preceding bead to form an even chain.

The technique instructions in this Decorating Guide will list the correct direction for holding the bag. When the bag direction differs for left-handed decorators, that direction will be listed in parentheses. For example, when a bag is to be held at 3:00 for a right-handed decorator, it should be held at 9:00 for a left-handed decorator.

Printing

Practice With: Tip 3 with message press
Icing Consistency: Thin
Bag Position: 45° at 3:00 (9:00)
Hold Tip: Lightly touching surface

You may pipe letters freehand, pipe over a pattern traced with a toothpick, or pipe after imprinting letters with a message press. If you are using a message press, let icing crust slightly, then imprint the message. With a steady, even pressure, squeeze out a straight line, lifting the tip off the surface to let icing string drop. To prevent tails from forming, be careful to stop squeezing before you touch tip to surface and pull away. Be sure the end of the tip is clean before you go on to another line.

Writing

Practice With: Tip 5
Icing Consistency: Thin
Bag Position: 45° at 3:00 (6:00)
Hold Tip: Lightly touching surface

You may pipe letters freehand, pipe over a pattern traced with a toothpick, or pipe after imprinting letters with a message press. If you are using a message press, let icing crust slightly, then imprint the message. Steadily squeeze, gliding along the surface in a smooth, continuous motion. Use your arm, not your fingers, to form each line, letter or word. Keep your wrist straight, moving your entire forearm as a single unit. After you begin to master the curves and swings of the letters, lift the tip up slightly as you write. You'll find you have more control if you let the icing draw out slightly over the surface as you write.

Note: Left-handed decorators may have to adjust the bag position to fit their writing style.

Outline

Characters or designs are often outlined first, then piped in with stars or zigzags. Outlines are used for facial features, too. Color flow plaques are also outlined before icing is flowed into the shape.

Practice With: Tip 3
Icing Consistency: Thin
Bag Position: 45° at 3:00 (9:00)
Hold Tip: Slightly above surface

1. Touch tip to surface. Raise the tip slightly and continue to squeeze.
2. The icing will flow out of the tip while you direct it along the surface.
3. To end, stop squeezing, touch tip to surface and pull away.

To Pipe-In

After outlining, using the same tip, squeeze out rows of lines to fill area. Pat icing down with fingertip dipped in cornstarch or smooth with dampened art brush.

Drop Strings

These flowing strings are a beautiful way to adorn the sides of a cake. The trick to making drop strings is to pull the bag toward you as the string drapes down. If you "draw" the string with the tip, you won't achieve a pretty curve and your strings will tend to break. Pipe at eye level to your cake so that strings line up evenly. The Cake Dividing Set (p. 138) is a great help in accurately dividing and marking your cake for even drop strings.

Single Drop Strings

Practice With: Tip 3
Icing Consistency: Stiff
Bag Position: Shoulder level at 4:30 (7:30)
Hold Tip: Lightly touching surface to attach

1. With a toothpick, mark horizontal divisions on cake in the width you desire. Touch tip to first mark and squeeze, pausing momentarily so that icing sticks to surface.
2. While squeezing, pull the bag toward you. Continue squeezing to allow the icing to drape naturally into an arc. Icing will drop by itself—do not move the tip down with the string. The end of the tip should be the same distance from the surface as the width from point to point on your cake.
3. Stop pressure before you touch tip to second mark to end string. Repeat, keeping drop strings uniform in length and width.

Multiple Drop Strings

Try a different color for each row of multiple drop strings—put holiday colors together to really dress up your cake.

To add multiple rows of strings, mark the cake for the deepest row and pipe that row. Return to the first drop string point, squeeze the bag, and drop a string with a slightly shorter arc than in the first row. Join the end of this string to the end of the corresponding string in the first row. Repeat the process for a third row of drop strings above the second.

STAR TIPS

Star

Practice With: Tip 16
Icing Consistency: Medium
Bag Position: 90°
Hold Tip: Between ¼ and ½ in. above surface

1. Hold the decorating bag straight up, with the tip between ¼ and ½ in. above the surface, while using your other hand to hold the tip steady. Squeeze the bag to form a star. Increasing or decreasing the pressure changes the size of the star.
2. Stop squeezing the bag completely before you lift the tip from the star.
3. Lift the tip up and pull away from piped star.

Full-out stars add even more dimension to your cake. To make them, hold bag at a 45° angle to surface. As you squeeze out icing, pull tip up and away from cake. When your

mouth is high enough, stop pressure and pull tip away. Work from bottom to top of area to be covered with pull-out stars.

Star Fill In

Because these close-together stars require so much piping from the same bag, it's a good idea to keep replenishing the icing. Replenish icing when it gets soft or stars will be poorly defined.

Practice With: Tip 16
Icing Consistency: Medium
Bag Position: 90°
Hold Tip: ¼ in. above surface

1. Pipe a row of stars evenly and close together, adjusting the tip position slightly each time so that the points of the stars interlock and cover the area without gaps.
2. Pipe a row of stars beneath the first, again adjusting tip position to close any gaps.
3. Continue to fill in entire area.

Zigzag

A quick and popular way to fill in outlined areas, perfect for ribbed sweater and cuff effects. You can use tight zigzags to cover the entire side of your cake—they look great!

Practice With: Tip 16
Icing Consistency: Medium
Bag Position: 45° at 3:00 (9:00)
Hold Tip: Lightly touching surface

1. Steadily squeeze and move your hand in a tight up and down motion.
2. Continue piping up and down with steady pressure. To end, stop pressure and pull tip away. For more elongated zigzags, move your hand to the desired height while maintaining a steady pressure. For a more relaxed look, just increase the width as you move the bag along.
3. Repeat as you move in a straight line with consistent up/down motion.

Shell

Most popular icing technique of all, the shell is the basis for many borders. Lift tip slightly when piping shells to avoid a bumpy look.

Practice With: Tip 21
Icing Consistency: Medium
Bag Position: 45° at 6:00
Hold Tip: Slightly above surface

1. Hold the bag in the 6:00 position so that you can pull the bag toward you. The tip should be slightly above the surface.
2. Squeeze hard, letting the icing fan out generously as it lifts the tip—do not lift the bag. Gradually relax your pressure as you lower the tip until it touches the surface.
3. Stop pressure and pull the tip away, without lifting it off the surface, to draw the shell to a point.
4. To make a shell border, start the end of your next shell so that the fanned end covers the tail of the preceding shell to form an even chain.

Rope

Finish your piped baskets with pretty edging and handles. Excellent for western or nautical themed cakes. You can make a great-looking rope with star or round tips (or basketweave tips, ridged or smooth side up).

Practice With: Tip 21
Icing Consistency: Medium
Bag Position: 45° at 4:30 (7:30)
Hold Tip: Lightly touching surface

1. Using a steady, even pressure, move the tip in a gentle sideways "S" curve. Stop pressure and pull tip away.
2. Insert tip under the bottom curve of the "S" shape.
3. Squeeze the bag with steady pressure as you pull down, then lift the tip. Move up and over the tail of the "S" as you continue to squeeze and form a hook.
4. Keep spacing as even as possible and pipe "S" curves uniform in thickness, length and overall size. Be sure to tuck the tip into the bottom curve of the previous "S" before you begin squeezing to insure the clean, continuous look of a rope.

Rosette

Practice With: Tip 16
Icing Consistency: Medium
Bag Position: 90°
Hold Tip: Lightly touching surface

1. Keeping the tip slightly above the surface, squeeze out icing to form a star and, without releasing pressure, move the tip in a tight, complete rotation, starting at 9:00 (3:00), moving to 12:00...
2. then to 3:00 (9:00) and 6:00...
3. and ending back at 9:00 (3:00).
4. Stop pressure and lift tip away.

BORDER

Fondant Rope Border

1. Use palms of hands to roll fondant logs, 1/4 in. diameter. You will need 4 pieces 36 in. long for cake border; twist 2 ropes together to make each rope section. Lay pieces side by side and gently press together at one end to join.
2. Holding the joined end in a stationary position, twist the other end 2 to 3 complete turns. Continue twisting as needed.
3. Attach rope to bottom border using a damp brush. Moisten cake slightly and position rope, pressing ends lightly to secure.

MULTIPLE TIPS

Swirl Drop Flower

The swirled look adds a nice motion effect to the cake. You must squeeze and turn at the same time.

Practice With: Tips 2D, 3; use Large Coupler
Icing Consistency: Use royal icing; medium for flower, thin for center
Bag Position: 90°
Hold Tip: Slightly above surface

1. Turn your wrist in toward you before piping. Hold bag straight up, just touching the surface. You will turn wrist a full twist. Starting with the flat of your knuckles at 9:00 (3:00). As you squeeze out the icing, slowly turn your hand, with knuckles ending at 12:00.
2. Stop squeezing and lift the tip away.
3. Make a tip 3 dot flower center, holding your bag straight up and keeping the tip buried as you squeeze. Stop squeezing, then pull your tip up and away.

Icing Ribbon Roses

Practice With: Tip 104
Icing Consistency: Use stiff consistency royal icing or Snow White Buttercream Icing
Bag Position: 90° at 3:00 (9:00)
Hold Tip: Wide and touching center of flower nail
Flower Nail: #7

1. Starting at center of flower nail topped with a waxed paper square, turn nail counterclockwise as you squeeze out a ribbon of icing, using even pressure.
2. Continue squeezing, wrapping the ribbon of icing around to form a rose.
3. Slip waxed paper square with ribbon rose from nail and let dry.

PETAL TIPS

Ruffle

Everyone loves a ruffle's graceful motion—ruffles always add interest to your cake. Use them as a top border, to frame a plaque or to trim doll dresses and baby bonnets.

Practice With: Tip 104
Icing Consistency: Medium
Bag Position: 45° at 3:00 (9:00)
Hold Tip: Wide and lightly touching surface with narrow end facing down and away from surface

1. Keep the wide end of your tip touching the cake with the narrow end down. Move wrist up to pull up icing.
2. Move wrist down to complete one curl of the ruffle.
3. Repeat up and down motion.
4. Raise and lower the narrow end as you move around the cake. Repeat this motion for the entire ruffle.

Flower-Making Techniques

Explore beautiful flowers and leaves, which add lovely color to your cake design. Create the magnificent rose—the most popular icing flower of all. With practice, your flowers will have the just-picked look of real garden flowers.

FLOWER NAIL FLOWERS

Using a Flower Nail

The nail is a revolving platform you hold in your hand to conveniently build roses and other flowers. It allows you to work close up, to turn for easy piping and to remove your completed flowers without damage, to dry.

The key to making the flower on the nail is to coordinate the turning of the nail with the formation of each petal.

Attach a square of waxed paper on the flat surface of the flower nail using a dot of icing. Pipe your flower directly on the waxed paper. Hold the flower nail between the thumb and forefinger of your left (right) hand (use other fingers to support nail) and roll it slowly counterclockwise (clockwise for lefties) as you press out icing with the decorating bag held in the right (left) hand. Your right (left) hand moves in and out, or up and down, as it holds the decorating bag and tip at just the right angle (in most cases 45°) and keeps the icing flowing at an even speed. After piping, slide the waxed paper with flower off the nail to dry.

The Wilton Rose

NOTE: If you are going to be placing your roses on your cake immediately, waxed paper squares are not needed. To remove finished roses, use the Flower Lifter (p. 140). Slide flower from lifter onto cake, using a spatula.

Practice With: Tips 104, 12
Icing Consistency: Royal or stiff buttercream
Bag Position: Base 90° (straight up); petals 45° at 4:30 (7:30)
Hold Tip: For base, slightly above nail; for petals, wide end touching base
Flower Nail: #7

1. Make the rose base, using tip 12 and flower nail #7. Hold the bag straight up, the end of tip 12 slightly above the center of your waxed paper-covered flower nail, which is held in your other hand. Using heavy pressure, build up a base, remembering to keep your tip buried as you squeeze. Start to lift the tip higher, gradually raise the tip, and decrease the pressure.
2. Stop pressure, pull up and lift away. The rose base should be 1 1/2 times as high as the rose tip opening.

3. Make the center bud, using tip 104. Hold nail containing base in your left (right) hand and bag with rose tip 104 in right (left) hand. Bag should be at a 45° angle to the flat surface of the nail and in the 4:30 (7:30) position.

The wide end of the tip should touch the cone of the icing base at or slightly below the midpoint, and the narrow end of the tip should point up and angled in over top of base.

4. Now you must do 3 things at the same time: squeeze the bag, move the tip and rotate the nail. As you squeeze the bag, move the tip up from the base, forming a ribbon of icing. Slowly turn the nail counterclockwise (clockwise for lefties) to bring the ribbon of icing around to overlap at the top of the mound, then back down to starting point. Move your tip straight up and down only; do not loop it around the base.
5. Now you have a finished center bud.

6. Make the top row of 3 petals. Touch the wide end of tip to the midpoint of bud base, narrow end straight up.
7. Turn nail, keeping wide end of tip on base so that petal will attach. Move tip up and back down to the midpoint of mound, forming the first petal.
8. Start again, slightly behind end of first petal, and squeeze out second petal. Repeat for the third petal, ending by overlapping the starting point of the first petal. Rotate the nail 1/3 turn for each petal.

9. Make the middle row of 5 petals. Touch the wide end of tip slightly below center of a petal in the top row. Angle the narrow end of tip out slightly more than you did for the top row of petals. Squeeze bag and turn nail moving tip up, then down, to form first petal.
10. Repeat for a total of 5 petals, rotating the nail 1/3 turn for each petal.
11. The last petal end should overlap the first's starting point.

12. Make the bottom row of 7 petals. Touch the wide end of tip below the center of a middle row petal, again angling the narrow end of tip out a little more. Squeeze bag and turn nail to end of fingers, moving tip up, then down to form first petal.
13. Repeat for a total of 7 petals, rotating the nail 1/3 turn for each petal.

14. The last petal end should overlap the first's starting point.
15. Slip waxed paper and completed rose from nail. This is the completed Wilton Rose.

Flower-Making Techniques (cont.)

Gum Paste Roses and Leaves

(see *Floral Frost*, p. 77 and *Setting the Gold Standard*, p. 86)

1. In advance: Make the rose center. Roll a 1/2 in. ball of gum paste and form into a teardrop shape. Projects listed above use 6 in. lengths of 22- or 24-gauge florist wire. Bend back end of wire into a 1/4 in. hook. Dip hook end into gum paste adhesive and insert at bottom of rose center, inserting halfway through base. Press bottom of center to shape and smooth against wire. Let dry at least 48 hours.

2. Roll out gum paste 1/8 in. thick. Using the large rose cutter from the Stepsaving Kit (p. 153), cut blossom shape. Use a knife to make a 1/2 in. cut between each petal toward middle of blossom. Place on thin foam and use ball tool from 10-Pc. Fondant/Gum Paste Tool Set to soften edges of petals. Move blossom to thick foam and cup center by pressing in middle with ball tool.

3. Apply gum paste adhesive to rose center. Insert the wire holding the rose center into the middle of the blossom and thread blossom up to the bottom of the rose center. Visualize the 5-petal blossom as a stick figure, with petals corresponding to "head", "arms" and "legs". Wrap the head petal around rose center.

4. Brush bottom half of one "arm" and opposite "leg" with adhesive and wrap around the center bud. Repeat for remaining petals. Gently press bottom to shape. Petals should overlap each other. Pinch off any excess gum paste from bottom. Furl back petal edges of the outer layer of petals.

5. Prepare the next blossom; cut slits and soften edges as above. Transfer to thick foam and use ball tool to cup the 2 "arm" petals. Turn over blossom and cup 2 "leg" petals and "head" petal. Turn over blossom again and cup the center. Brush adhesive on bottom of rose center; thread blossom onto wire. Brush the 2 "arm" petals with adhesive and attach, centering over the seams of the previous 2 petals.

6. Brush bottom half of remaining petals with adhesive and attach, spacing evenly. Press bottom to shape; pinch off excess if needed.

7. Add a third blossom; cut slits and soften edges as in step 2. Transfer to thick foam. Using the ball tool, cup all petals. Turn blossom shape over and cup center. Brush adhesive on bottom of rose center. Thread wire through the center of the blossom shape. Brush adhesive on bottom half of petals as needed.

8. Turn rose over and let petals fall naturally into place. Gently press petals against the rose center to attach.

9. Roll out gum paste 1/8 in. thick and cut calyx using calyx cutter from the Stepsaving Set. Brush bottom of rose center with adhesive and thread wire through center of calyx. Brush adhesive on bottom half of sepals and press to attach. Bend top half of wire stem down and let rose hang down to dry in craft foam block.

For Stephanotis:

1. Make a 1/4 in. hook on end of 6 in. long 24-gauge wire.

2. Roll a 1/2 in. ball of gum paste into a teardrop shape. Pinch and flatten wide end into a golf tee shape.

3. Place, tee side down, on smooth surface lightly coated with shortening. Roll out top of tee with modeling stick to the diameter of calyx cutter from Floral Collection Flower Making Set.

4. Center cutter over tee and cut staphanotis. If flower sticks in cutter, push out gently with modeling stick.

5. Hold staphanotis base between thumb and forefinger. Insert pointed end of modeling stick into center of flower. Rotate stick in a circular motion to widen the center.

6. Make center vein on each petal, scoring with small veining tool from flower center to petal point.

7. Brush wire, 1 in. down from top hook end with adhesive. Push bottom of wire through top of flower, slide down until hook is positioned halfway into flower. Pinch base of flower to adhere to wire.

For Leaves:

1. Prepare 6 in. piece of 26-gauge wire. Roll out gum paste 1/8 in. thick. Cut desired number of leaves using rose leaf cutter from Floral Collection Flower Making Set or Stepsaving Rose Bouquets Set (p. 132). Work with one leaf at a time, keeping other leaves under practice board flap.

2. Place leaves on thin foam. Use small end of veining tool to draw veins on leaves.

3. Turn leaf over and apply a line of gum paste adhesive, about 3/4 up from bottom in the center of the leaf. Attach wire at moisture line.

4. Pinch bottom of both sides of leaf slightly toward back of wire stem to attach. Let dry on small flower former dusted with cornstarch, wire side down. Position leaves in different directions for a variety of shapes.

Fondant Ribbon Roses

(see *Words Ring True*, p. 80)

Tint fondant according to project instructions. Roll out 1/8 in. thick. Cut a 1 x 6 in. strip for each rose. Brush bottom edge with damp brush; roll and gather, pinching bottom edge to secure. Trim off excess with scissors. Set in candy melting plate dusted with cornstarch; let dry.

Attaching Royal Icing Roses to Wire Stems

(see *Contemporary Curves*, p. 82)

Follow The Wilton Rose instructions on p. 121. Roses are made using 6 color versions: Creamy Peach with Pink in dark, medium and light; Creamy Peach with Lemon Yellow in dark, medium and light. Make roses as follows: Using tip 124 with tip 12 bases, 3 of each dark shade. Using tip 104 with tip 12 bases, 3 each dark peach/pink and medium peach/yellow. Using tip 103 with tip 10 bases, 3 medium peach/pink and 5 light peach/pink. Using tip 102 with tip 7 bases, 5 each light peach/pink and light peach/yellow. Using tip 101 with tip 5 bases, 6 each light peach/pink and light peach/yellow. On 1 in. waxed paper square, using royal icing, pipe cone-shaped calyx bases. For tip 101, 102 and 103 roses, pipe 30 cone-shaped calyx bases with tip 4. For tip 104 and 124 roses, pipe 12 tip 7 calyx bases. Use 24-gauge florist wire for tip 4 calyxes and 20-gauge florist wire for tip 7 bases. Make 1/2 in. hook on end of florist wire and insert hook into base. With slightly moistened decorator brush, smooth and taper the icing around the wire. Push other end of wire into craft block and let dry. Remove waxed paper and attach pre-made flower with dots of royal icing. Let dry.

FLORAL GREENERY

Leaves

Practice With: Tips 352, 67, 366

Icing Consistency: Buttercream thinned with corn syrup

Bag Position: 45° at 6:00

Hold Tip: Lightly touching surface; wide opening parallel to surface

Basic Leaf
Tip 352

Veined Leaf
Tip 67

Large Leaf
Tip 366
Use large coupler

1. Squeeze hard to build up the base and, at the same time, lift the tip slightly.
2. Relax pressure as you pull the tip toward you, drawing the leaf to a point.
3. Stop squeezing and lift away.

Vines

Practice With: Tip 3

Icing Consistency: Thin

Bag Position: 45° at 3:00 (9:00)

Hold Tip: Lightly touching surface

1. Touch your tip lightly to the surface as you start to squeeze, then lift slightly above the surface as you draw out the stem.
2. Move tip gently up and down to form "hills and valleys." To end the line, stop squeezing and pull the tip along the surface.
3. Add secondary curved stems, starting at main stem, stopping pressure as you pull to a point.

Puddle Dots

Thin royal icing (for color flow), adding 1/2 teaspoon water per 1/4 cup of icing. Icing is ready for flowing when a small amount dripped back into mixture takes a count of 10 to disappear. On waxed paper, pipe a ball, 1/4 to 1 1/4 in. diameter, depending on project instructions, using thinned icing in a cut parchment bag. Let dry 48 hours. Decorate following project instructions.

BRUSHING DECORATIONS WITH PEARL DUST

It's easy to add a shimmering touch to fondant and candy decorations with Wilton Pearl Dust (p. 151). This food-safe powder creates rich, lustrous highlights on flowers, bows, letters and more. To apply, just brush onto your decoration with a soft artist brush. Or, to paint decorations, pour a small amount of clear vanilla, lemon extract or vodka into a Color Tray (p. 157) cavity; stir in a small amount of Pearl Dust and brush onto your decoration.

Other Decorating Techniques

Combing

Practice With: Icing Sculptor, Decorating Comb or Triangle (p. 143), Trim 'N Turn Cake Turntable (p. 141)

Icing Consistency: Medium-to-thin buttercream

Cover the cake with a slightly thicker coating of icing so the comb's ridges will not touch the cake. Hold comb at 45° angle. Comb immediately after icing cake, while icing is soft. Using a turntable helps to keep the movement smooth. Use the Icing Sculptor, Decorating Comb or Decorating Triangle to add different contoured effects to your iced cake. Choose the type of effect you want—wide or narrow—then run that edge around your cake to form ridges. Ridges will be deep or shallow depending on the Icing Sculptor blade or the side of Decorating Comb or Triangle you use.

Icing Sculptor

Select the sculpting blades you want and slide into holder. Press sculptor into iced cake as you rotate cake on turntable. Mix and match between the 84 blades to achieve the perfect look for your cake.

Pattern Press

The trick to uniform designs and steady writing and printing is using a pattern press (p. 142). Simply imprint the press on any icing, including fondant.

Practice With: Tips 3, 16
Icing Consistency: Medium
Bag Position: 45° at 3:00
Hold Tip: Slightly above surface

1. Lightly press pattern onto your iced or fondant-covered cake to imprint the design.
2. Outline the imprinted design with icing, using the tip of your choice. Change the tip to change the look of each pattern.

Tinting Shredded Coconut

Place desired amount of coconut in plastic bag, add a little color with a toothpick and knead until color is evenly blended. Dry on waxed paper.

Coating Spaghetti or Lollipop Sticks with Icing

Break pieces of uncooked spaghetti or cut sticks into desired lengths. Use decorating bag with specified tip, and royal or buttercream icing as specified in cake directions. Insert spaghetti or stick into open end of tip, then as you squeeze bag, pull out of tip, coating with icing. Let dry on waxed paper covered boards.

Simple Bow

(See *Salute the Students*, p. 74 and *Ariel's Ocean Hearts*, p. 31)

For each bow needed, roll out fondant 1/8 in. thick and cut 1 strip. For *Salute the Students*, cut 1/4 x 12 in. red strip. Fold to form loops and streamers. Cut a 4 1/2 x 1 in. strip to wrap around center for knot. Let dry on waxed paper-covered board dusted with cornstarch. Repeat to make 3 more bows. Reserve remaining red fondant. For *Ariel's Ocean Hearts*, cut 1/4 x 10 in. rose strip and fold loops and streamers as above. Roll a small ball for center knot and attach with damp brush.

Covering Base Boards with Fondant

Cut cake boards 2 in. larger in diameter than your cake, unless otherwise directed, then roll out fondant about 1 in. larger than board size. Wrap board with foil.

1. Lightly coat board with piping gel to help the fondant stick to the foil.
2. Roll out fondant to desired size, 1/8 in. thick. Position over board using a rolling pin, draping fondant over edge.
3. Trim excess fondant from edges under bottom of board. Smooth top and sides with Easy-Glide Smoother.

Curliques

Toothpicks, Lollipop Sticks or dowel rods may be used for various sizes.

1. Roll out fondant 1/8 in. thick on Roll & Cut Mat lightly dusted with cornstarch. Cut into thin strips.
2. Loosely wrap strips around a Lollipop Stick several times to form curls. Let set 5 to 10 minutes.
3. Slide cut off Lollipop Stick and let dry. Attach to cake with Thinned Fondant Adhesive (p. 119).

Marbleizing Fondant

Using Icing Color: Roll fondant into a ball, kneading until it's soft and pliable. Using a toothpick, add dots of icing color in several spots. Knead fondant slightly until color begins to blend in, creating marbleized streaks. Roll out fondant to desired shape.

Using Pre-Tinted Fondant and White Fondant: Roll a log each of tinted and white fondant. Twist one log around the other several times. Knead fondant slightly until color begins to blend in, creating marbleized streaks. Roll out fondant to desired shape.

Candy Making Techniques

USING CANDY MELTS

Fast-melting confectionery coating wafers are the key to easy candy making. Smooth texture and great taste make Candy Melts your most convenient option for molding. Check out all the great colors on p. 196.

To Melt

Chocolate Pro Electric Melting Pot (p. 196):

The most convenient way to melt—no microwave or double boiler needed! Melts large amounts of Candy Melts in minutes.

Double boiler method: Fill lower pan with water to below level of top pan. Bring water to simmer, then remove from heat. Put Candy Melts in top pan and set in position on lower pan. Stir constantly, without beating, until smooth and completely melted.

Microwave method: In microwave-safe container, microwave 1 package Candy Melts at 50% power or defrost setting for 1 minute. Stir thoroughly. Continue to microwave and stir at 30-second intervals until smooth and completely melted. Candy Melts may also be melted in Candy Decorating Bags (p. 196). Melt as described above, squeezing bag between heating intervals to blend Candy Melts together. When completely melted, snip off end of bag and squeeze melted Candy Melts into molds. Throw away bag when empty.

NOTE: Confectionery coating will lose its pouring and dipping consistency if overheated, or if water or other liquid is added. If coating is overheated, add 2 teaspoons hydrogenated vegetable shortening per 14 oz. Candy Melts.

To Mold (1 color candies)

Pour melted candy into clean, dry mold; tap lightly to remove air bubbles. Place mold on level surface in refrigerator until bottom of mold appears frosty or until candy is firm. Pop out candy. For lollipops, fill molds, tap to remove air bubbles, then position sticks in mold. Rotate sticks to thoroughly cover with candy so they remain securely in place. Chill to set then unmold.

To Color

Add Candy Colors (p. 199) to melted Candy Melts a little at a time. Mix thoroughly before adding more color. Colors tend to deepen as they're mixed. Pastel colored candies are most appetizing, so keep this in mind.

To Flavor

The creamy, rich taste of Candy Melts can be enhanced by adding approx. ½ teaspoon oil-based Candy Flavor (p. 199) to 14 oz. (one pack) of melted Candy Melts. Never use water-based flavorings; they will cause candies to harden.

Multi-colored candy

"Painting" Method: Before filling mold cavity, use a decorator brush dipped in melted Candy Melts to paint features or desired details; let set. Fill mold and chill until firm as described above.

Piping Method: Use a parchment or Candy Decorating Bag filled halfway with melted candy. Cut small hole in tip of bag and gently squeeze to

add candy detail to mold; let set. Fill mold and Chill until firm as described above.

Marbleizing Method

Separately melt 2 different colors of Candy Melts. Stir colors together, using a lollipop stick to draw lines in mixture. Do not overmix. Quickly spoon or place into molds while mixture is still soft. Tap. Chill until firm; unmold.

Layering Method

Pour melted Candy Melts into dry molds to desired height. Chill until partially set. Pour melted contrasting color to desired height. Chill until partially set. Repeat until desired number of layers are formed; chill until firm and unmold.

SPECIALTY TECHNIQUES

Candy Shells

Fill pan cavity to the top edge with melted candy. Tap on counter to remove air bubbles. Let chill for 8 to 10 minutes or until a ¼ to ½ in. shell has formed. Pour out excess candy then return shell to refrigerator to chill completely. Carefully unmold shells (if you have difficulty removing shells, place pan in freezer for 2-3 minutes, then unmold). Smooth top edges by sliding across warmed cookie sheet or warming plate. Excess candy can be reheated and reused.

Candy Shells in Baking Cups

Spoon or pipe 1 to 2 tablespoons of melted candy into the bottom of a standard baking cup. Brush candy up sides, to desired height, forming an even edge. Chill 5 to 8 minutes. Repeat process if a thicker shell is needed. Chill until firm. Carefully peel baking cup off candy shell.

Covering Cakes and Cookies with Candy Melts or Poured Icings

For Candy Melts, melt following package directions. For icing recipes, follow recipe directions to reach pouring consistency. For canned icing, heat in microwave at Defrost setting (30% power) for 20-30 seconds; stir. Repeat until consistency of icing will pour. Place cooled cakes or cookies on cooling grid positioned over cookie sheet or pan. Pour or pipe candy or icing on center of item, continue covering top so that candy or icing drips down and covers sides. Let dry.

CANDY PLAQUES

You can use pans as candy molds to make solid decorative plaques. If your pan has detail, it may be painted or filled in desired colors as you would for any candy mold.

Pour melted candy into center of pan cavity. Tap pan gently on counter to eliminate bubbles. Candy should be ¼ to ¾ in. thick, depending on project instructions. Place pan in refrigerator for about 30-40 minutes until firm (check occasionally; if candy becomes too chilled, it may crack). Unmold onto hand or soft towel (tap gently if necessary).

Pegasus Candy Plaque

(see *Pegasus Party Cake*, p. 12)

Use tape or foil to block off rockers of Rocking Horse Pan. Melt candy and pour into pan, tap to eliminate bubbles. Chill 30-40 minutes until firm; unmold.

Position plaque on foil-wrapped board; cut to fit. In royal icing, pipe tip 18 pull-out star mane and tail. Pipe tip 3 dot nose, outline eye and mouth. Outline and pipe in hooves (pat smooth with finger dipped in cornstarch).

SpongeBob Candy Plaque

(see *Well Done, SpongeBob!*, p. 35)

Pipe details into *SpongeBob* pan using melted candy in cut parchment bags. Tint candy as follows: 2 oz. lime green (combine green and yellow candy colors), 1 oz. each blue, red, pink (combine pink and orange candy colors) and black (brown fondant pants are added later); reserve melted white. Pipe in black pupils and inside of mouth; pipe in lime spots and red tie. Chill to set. Pipe in blue of eyes and pink tongue; chill. Pipe in whites of eyes, teeth, shirt, pant area and sleeves; chill. Melt 2 bags yellow Candy Melts; pour into pan for arms and head, filling pan only up to background areas. Chill until completely set; unmold. Using melted candy in cut parchment bags, pipe black lashes, red cheeks, freckles and lip. Overpipe back of arms for support. Let set. Attach plastic dowel rod to back of plaque with melted candy, allowing 3½ in. of dowel rod to extend at bottom to insert into cake.

Disney/Pixar WALL•E Candy Plaque

(see *Growing Up with WALL•E*, p. 36)

Tint melted white candy as follows: 5 oz. dark gray, 4 oz. light gray, 3 oz. black, 1 oz. red; reserve 1 oz. white. Use melted candy in cut parchment bags to pipe in details of WALL•E cake pan; chill to set candy between each step. Using white, fill in eye highlights, alternating stripes on raised arm and space between other arm and body. Using black, fill in pupils, inside hands, chest square and connector on raised arm. Using light gray, pipe in outer eyes, ear, neck, hands and gears inside tires; pipe a 1¼ x 3¼ in. rectangle across upper chest. Using red, pipe in remaining stripes and square where "E" will go. Using black, pipe in inside of tires and gears. Using dark gray, pipe

in outside of tires (treads are added later). Melt yellow candy. Use disposable decorating bag to fill in remaining design areas and to back all other colors. Attach lollipop stick supports behind neck, raised arm and hand with melted candy. Chill 30-40 minutes, then unmold onto soft towel and set on waxed paper-covered board.

Tint 1 oz. fondant black; add ¼ teaspoon Gum-Tex. Roll a ¼ diameter rope, 3½ in. long, for connector. Curve and let dry; attach to back of plaque from ear to neck with melted candy. Cut 2 plastic dowel rods to 5 in. long. Attach to back of plaque using melted candy, positioning rods 1 in. from inside edge of each tire tread with 3 in. extended at bottom; chill to set completely. Turn plaque over and pipe on details using melted candy in cut parchment bags. Pipe white "E," yellow vents in square, red "WALL•E" and chest button, black tire treads and controls; overpipe around pupils with dark gray. Using melted candy, attach a lollipop stick to back of raised hand; attach stem of plant to boot; let set. Attach boot to hand; let set. Position at party by sliding plastic dowel rods over wooden dowel rods you've inserted in your cakes.

Disney/Pixar Cars Candy Plaque

(see *Once Around the Oval*, p. 36-37)

Using candy colors, tint 14 oz. dark cocoa Candy Melts black. Using white candy, tint 3 oz. each yellow, orange and gray; tint 1 oz. blue. Reserve 3 oz. white. Pipe melted candy into cake pan using cut parchment bags; chill until set after each color. Pipe: blue ring irises, gray windows, muffler, small lightning bolt, yellow lightning bolt, orange number and bold, red wheel centers, black tires, pupil and center of number, white dots on hood, mouth, headlights and windshield. Chill until firm. Fill pan with 35 oz. melted red candy. Chill 30-40 minutes or until set; unmold. Using melted candy in cut parchment bags, outline number with white candy; overpipe details and pipe in tongue with black candy. Chill until firm. Pipe in tongue to 6 in. long. Attach to back at wheels using melted candy, allowing 2 in. to extend at bottom to insert into cake.

Candy Sleigh, Reindeer, Santa

(see *Hoofs on the Roofs*, p. 49)

For Sleigh: Position sleigh cutter from set on non-stick pan, pour in melted green candy ½ in. thick. Chill until firm. Repeat to make opposite side of sleigh. Fold a sheet of aluminum foil into a 4 x 3 in. dam; fill with melted green candy ½ in. thick. Chill until firm; unmold. Bring to room temperature before cutting. Using ruler and knife, cut a 1 x 1 in. front and two 1 x 1½ in. pieces for bottom and back of sleigh. Assemble sleigh on waxed paper using melted candy in a cut parchment bag. Tint portion of white candy gray using black color. Pipe gray runners and white snow along top. Chill until firm.

For Reindeer: Tint portion of melted white candy black. Add a small amount of light cocoa candy to white for antlers. Using piping method, mold 6 reindeer filling only body area of Santa & Reindeer Pretzel Mold. Chill until firm; overpipe to reinforce body. Chill until firm; unmold. Attach lollipop stick to back legs at an angle using melted candy. Let set.

For Santa: Tint portion of melted white candy with a small amount of red candy for face. Mold Santa without pretzel using piping method.

COLOR FLOW

Working With Color Flow

1. Trace your design pattern onto parchment paper, then tape paper onto a cake circle or the back of a cookie pan. Cover with waxed paper; smooth and tape. Using tip 2 and parchment bag half-filled with full-strength color flow, squeeze, pull and drop icing string following pattern outline. Stop, touch tip to surface and pull away. If you will be using the same color to fill in, let outline dry a few minutes until it "crusts." To prevent bleeding of different colors, let outline dry 1-2 hours before filling in.

2. Thin color flow mixture with water. Cut opening in parchment bag to the size of tip 2. Fill in design with thinned color flow.

3. Let decorations air dry thoroughly, at least 48 hours. To remove, cut away waxed paper from board, then turn over and peel waxed paper off the color flow piece.

Hint: For curved decorations, dry pieces on flower formers. To easily remove dried color flow, pull waxed paper backing over the edge of a table with one hand, while holding decoration with other hand. Waxed paper will pull off naturally. Or, with dried color flow resting on cookie sheet, place cardboard sheet over color flow, lift and turn over so that top of decoration rests on cardboard. Lift off waxed paper.

Since any moist icing will break down color flow, either position color flow decorations on cake shortly before serving or place on sugar cubes, attaching with full-strength Color Flow.
